---

Hi Twister,

Why don't you use the mp3 audio format, which can be received with every Internet Radio.

I don't want to hear the programm via PC.

Hi Hugo,

Mainly because of mp3's low quality encoding.

anyway, DJ's may broadcast in their favorite format, including MP3. It's just a personal decision to cast in AAC.

Cheers.

Hi Twister,

Of course it is your decision, but if nobody can hear your radio, you should think about.

Most of the Internet Receivers can't encode AAC.

Even my favorite pc webradio programm (Magix Webradio) can not receiver your station.

Hi Twister!

Now i can't hear anything!

is your radio on?

I prefer VLC - no problems.

I would say try VLC and it works.

Hugo

Then you should get another webradio program. I can't use ancient encoders, AAC on 96kbps deliver mp3 128 kbps quality.

It's not a matter of "nobody can hear your radio", but you're right about those dedicated Internet receivers. It's a shame they don't offer multi-codec decoding capabilities.

We might cast in mp3 too, will see.

VLC media player  
VLC on Windows  
The cross-platform open-source multimedia framework, player and server

VLC media player is a highly portable multimedia player and multimedia framework capable of reading most audio and video formats (MPEG-2, MPEG-4, H.264, DivX, MPEG-1, mp3, ogg, aac ...) as well as DVDs, Audio CDs VCDs, and various streaming protocols.

hugo.data I have no problems with VLC, You should try.

Greetz from Switzerland

---

Hi everybody,

I know that Winamp and VLC Player can decode der AAC format but they are not really usable for recording.  
With the programm I use, I can set plenty of timer for recording und I can work on the recorded files very comfortable.
